The C. Bechstein Vario digital mute system will exceed your highest expectations: optimum dynamics, elegant and unobtrusive design, perfectly simple use.

The C. Bechstein Vario optimally reproduces your playing dynamics, making your interpretation a captivating sound experience.

Most other mute systems make grave compromises in converting your playing dynamics — the exact touch of your fingers on the keys — into digital acoustic signals. Not the C. Bechstein Vario!

Simply connect the Vario System to the USB port of your computer, or even your iPad® with an adapter cable — to use it with MIDI applications for recording, composing, notation and much more. This way you can drive your musical software on your computer via the piano keyboard.

Now you don’t need to be a seasoned musician to write your own compositions, arrange your personal orchestra, or play solo with orchestral accompaniment. Such versatility makes the C. Bechstein Vario a true digital audio work-station: you’ll discover its limitless technical possibilities as you play — and enjoy composing and experimenting with others.

Unobtrusive design, black or white case.

Add to the pleasure of making music with the new C. Bechstein Vario, an innovative digital mute system with tremendous versatility and a built-in fun factor.

Order the C. Bechstein Vario as an accessory with any new C. Bechstein or W.Hoffmann upright or grand piano.
